

Measurements for Custom-Made Chinks and Chaps by Bruce Brock

Leather works Shop located on the lower level at the Jim Bell Store in Cottonwood Falls, Kansas. Visit Bruce's page at www.JimBellandSon.com

When taking measurements, wear the pants or jeans, boots and belt you normally wear when you will be using the chaps—especially if the chaps will have zippers as they are not adjustable.

- 1. WAIST:** Measure around at the point your chap belt is going to be worn. Often this is lower than your jeans belt and the total measure will probably be 4-5 inches greater than your jeans waist size.
- 2. OUTSEAM:** (overall length) From the point where the top of the chap will ride down to the ground with your boots on.
- 3. INSEAM:** from crotch to ground.
- 4. RISE:** from crotch to top of chap.
- 5. UPPER THIGH:** measurement around thigh at crotch.
- 6. MID THIGH:** circumference of thigh midway between crotch and knee.
- 7. KNEE:** circumference at center of knee.
- 8. CALF:** measurement at thickest part of calf—or if high-top boots—the largest measurement of the two.
- 9. TERMINAL POINT:** the length from top of chap to top of instep arch. Remember, when horseback the chap will rise a little. Chinks will normally terminate at mid calf.

Order Form: Bruce Brock Custom-made Chaps and Chinks

NAME _____
